

Putting Database References into RefWorks

Google Scholar

For Direct Export:

Note: To configure the direct export to RefWorks, you must configure Google Scholar by clicking on the Scholars Preferences link and selecting RefWorks as your default in the Bibliography Manager area.

1. Conduct your search in Google Scholar.
2. Each record displayed will have an **Import into RefWorks** link. Clicking on the link will launch the RefWorks login page.
3. Once you log in, you are brought automatically to the **Edit** view of the reference. You now have the option to edit the reference. Whether you edit or not make sure you save the reference in the folder of your choice or it will disappear.

To Manually Save and Export Records:

Note: You will need to change your **Scholars Preferences** and select **Reference Man** as your default bibliography manager in order to save a text file of your export to your computer. If you have an ISI ResearchSoft product (Reference Manager, EndNote or ProCite) installed on your computer the following directions may not work.

1. Conduct your search in Google Scholar.
2. Each record displayed will have an **Import into Reference Man** link. Click on the link.
3. You will be prompted to either Open or Save the file (which is already named and is a .ris file). Choose **Save**.
4. Select the location where you want to save the file.
5. Click **Save**.
6. Log in to **RefWorks**.
7. Select **References/Import** from the toolbar.
8. Select **RIS Format** as the data source and the database.
9. **Browse** to find the text file you saved to your computer.

10. Click **Import**.

11. Your records should appear in the **Last Imported Folder**.
