

## Putting Database References into RefWorks

### ScienceDirect

For Direct Export:

1. Conduct your search and select the records you wish to export from the article title list by putting a check in the box beside the record.
2. Click on the Export Citation option just above the article title list. This will bring you to the Export Citation page. (If you are already in an individual article and wish to export that citation choose Export Citation in the Article Toolbox to the right of the article. Once you choose this option follow steps 3 and 4)
3. In the Export Citation page you are allowed to choose your preferred formats. The Content Format option allows you to export the citation only or the citation and the abstract (recommended).  
The Export Format allows you to choose which bibliographic software you would like to export the citations into. Choose RefWorks Direct Export.
4. Click the Export button. If you are already logged into RefWorks the citation(s) will appear in your Last Imported Folder. If you are not logged into RefWorks you will be prompted to log in.
